

VENTURE 1

Okta federation into Office 365 and Single Sign On.

Client : Edinburgh Business School
Sector : Education

Geography : Scotland
Size : 200 Plus

Venture 1 Completes Single Sign On Implementation

The Challenge:

Edinburgh Business School was looking to implement Office 365, specifically OneDrive for Business and Skype for Business. The desire was to implement single sign on (SSO) and multi factor authentication (MFA) using their current OKTA Software environment.

Venture 1 Consulting has vast experience in Office 365 and SSO implementations, and carried out both the design and implementation of the solution.

The Solution:

The Okta infrastructure was installed and configured to synchronise EBS' Active Directory user accounts into Okta's cloud service. Any existing conflicting Okta accounts were merged with their AD counterpart. Okta SSO was configured allowing users to now log in with their AD credentials.

Okta was federated with Office 365 and configured to provision and license new user accounts into Office 365.

With this set up in place, end users can log into both the Okta portal and Office 365 with their EBS domain credentials. Okta's MFA is also used for users accessing from outside the company network.

Benefits Derived:

Ease of management and administration for user accounts and provisioning users. One set of credentials for multiple applications for end users.

Technologies:

- Okta
- Office 365

Key Activities:

- Design
- Implementation
- Documentation
- Handover
