# Venture 1 Consulting Windows 10 Deployment

Live Proof of Concept

Delivering a stable, supportable and secure desktop to end users is high on most businesses' IT priority list. Yet a Windows 10 deployment can often be a lengthy, complex and expensive exercise. Our Windows 10 Deployment 'Building Blocks' allow customers to take a logical, manageable and fully quantifiable approach to break the back of the problem.

The **Live Proof of Concept Package**, is Step 2 in the process and builds on the requirements and recommendations identified in the Planning Package with the creation of a functioning Windows 10 build with sample Windows 10 policies and a suite of standard applications, that can be scaled to a fully live environment if required.

Package Goal

Building upon the Planning Package, this package implements a limited Venture 1 Consulting standard Windows 10 deployment environment for the customer. This build is based on best practice and industry standards. To gain the most immediate benefit, it is best deployed as a new service within the customer's production environment, but can also be deployed into a test environment if preferred.

Most notably, the customer is left with a working Windows 10 deployment, which they can use to:

- **Gain experience in the technologies and approaches to Windows 10 clients**

- **Show business stakeholders Windows 10 clients**

- **Test applications**

- **Test policies**

- **Grow-out into a full production system**

The environment will be fully documented and handed over to the customer.

Elements Included

- **Basic Service Installation**

- **Windows 10 Boot Image and Task Sequence**

- **Sample Windows 10 Policies**

- **Standard application set of:**

  - Microsoft Office

  - Java

  - 7-Zip

  - Chrome Browser

  - PDF Viewer

  - 2 additional customer applications*

- **Customisation to customer specification***

*These items are inherently variable in effort, so are time limited.

Benefits

1 **A useful and fully useable Windows 10 deployment environment that can be developed further.**

2 **The ability to provide the business with "hands on" experience of the new Windows 10 build to aid design decisions and user acceptance.**

3 **A Windows 10 build based on Microsof best practice and many years of industry experience.**

4 **A non-generic setup, with all components installed into, and customised for the customer's own specific environment.**

5 **An environment designed to scale out to a full production installation.**

6 **Benefit from consultants with many years of experience in client deployment and from lessons learned elsewhere.**

Management and Deployment Options

There are two management and deployment technology options, depending on what the customer is licensed for:

- **Option 1:** System Center Configuration Manager

- **Option 2:** Windows Deployment Services / Microsoft Deployment Toolkit

The Proof of Concept is limited to utilising the standard Venture 1 Consulting build for expedient delivery, but there is time incorporated for some customisations.

This package can be supplemented with Add-on Package modules for additional functionality and features.

If there is a requirement for the demonstration of additional features and add-on modules, there is a strong preference for utilising SCCM.

Schedule

Up to 10 days consultancy in total.

Delivery timeline:

- **Day 1 to 3: Service build-out**
- **Day 3 to 5: WIndows image build**
- **Day 5 to 8: Application deployment build**
- **Day 8 to 10: Customisation, technical configuration documentation, build process documentation and handover**

Note that for expedience, the deployment environment is based on a Venture 1 Consulting packaged architecture and customised to customer needs, within the time available. Much of the environment is therefore pre-defined.
